## Portfolio's Optimism/Pessimism Score

At different points in time, the portfolio will be structured conservatively, aggressively, or in a middle-of-the-road fashion. This positioning reflects how optimistic, pessimistic, or neutral the portfolio is about future investment market opportunities and risks. The following graphic reports the portfolio's Optimism/Pessimism Score over the recent past. Green, yellow, and red represent optimism, neutrality, and pessimism, respectively.

Date	Optimistic, neutral, or pessimistic	Portfolio's optimism/pessimism score
1/10/2023	✓	83.0
2/10/2023	✓	78.5
3/10/2023	!	63.1
4/10/2023	!	62.1
5/10/2023	!	66.4
6/10/2023	✓	75.4
7/10/2023	✓	71.0
8/10/2023	✓	76.8
9/10/2023	!	65.1
10/10/2023	✗	30.4

Scores range from 0.0 to 100.0 (most pessimistic to most optimistic)

## Portfolio's Asset Mix

The portfolio's performance results from the asset allocation positions adopted by the portfolio over time. These asset mix decisions are particularly critical during challenging bear market periods. The following graphic shows the portfolio's high-level asset mix over the recent past.

## Important disclosures

All data and statistics were provided by YCharts (unless otherwise noted). It is not possible to invest, directly, in an index. It is not possible to invest, directly, in any index referred to in this document. Past performance is not an indicator of future results.

The information in this document is for the purpose of information exchange. This is not a solicitation or offer to buy or sell any security. You must do your own due diligence and consult a professional investment advisor before making any investment decisions.

The use of a proprietary technique, model, or algorithm does not guarantee any specific or profitable results.

The risk of loss in trading securities can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. No strategy, including asset allocation and diversification, can assure success or protect against loss. Stock investing involves risk, including loss of principal. Bonds are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and bonds are subject to availability and change in price. International debt securities involve special additional risks. These risks include, but are not limited to, currency risk, geopolitical and regulatory risk, and risk associated with varying settlement standards. These risks are often heightened for investments in emerging markets. International debt securities involve special additional risks. These risks include, but are not limited to, currency risk, geopolitical and regulatory risk, and risk associated with varying settlement standards. These risks are often heightened for investments in emerging markets. The fast price swings in commodities and currencies will result in significant volatility in an investor's holdings.
